**MARK  
SCHEME**

## **General Marking Instructions**

### **Introduction**

Mark schemes are published to assist teachers and students in their preparation for examinations. Through the mark schemes teachers and students will be able to see what examiners are looking for in response to questions and exactly where the marks have been awarded. The publishing of the mark schemes may help to show that examiners are not concerned about finding out what a student does not know but rather with rewarding students for what they do know.

### **The Purpose of Mark Schemes**

Examination papers are set and revised by teams of examiners and revisers appointed by the Council. The teams of examiners and revisers include experienced teachers who are familiar with the level and standards expected of students in schools and colleges.

The job of the examiners is to set the questions and the mark schemes; and the job of the revisers is to review the questions and mark schemes commenting on a large range of issues about which they must be satisfied before the question papers and mark schemes are finalised.

The questions and the mark schemes are developed in association with each other so that the issues of differentiation and positive achievement can be addressed right from the start. Mark schemes, therefore, are regarded as part of an integral process which begins with the setting of questions and ends with the marking of the examination.

The main purpose of the mark scheme is to provide a uniform basis for the marking process so that all the markers are following exactly the same instructions and making the same judgements in so far as this is possible. Before marking begins a standardising meeting is held where all the markers are briefed using the mark scheme and samples of the students' work in the form of scripts. Consideration is also given at this stage to any comments on the operational papers received from teachers and their organisations. During this meeting, and up to and including the end of the marking, there is provision for amendments to be made to the mark scheme. What is published represents this final form of the mark scheme.

It is important to recognise that in some cases there may well be other correct responses which are equally acceptable to those published: the mark scheme can only cover those responses which emerged in the examination. There may also be instances where certain judgements may have to be left to the experience of the examiner, for example, where there is no absolute correct response – all teachers will be familiar with making such judgements.

		AVAILABLE MARKS																
1	(a) 1. Potassium 2. Sodium [1] 3. Calcium 4. Magnesium [1] 5. Aluminium 6. Zinc [1] 7. Iron 8. Copper [1]	[4]																
(b)	<table border="1"> <thead> <tr> <th>OBSERVATION</th><th>TICK</th></tr> </thead> <tbody> <tr> <td>The metal moves about the surface</td><td>✓</td></tr> <tr> <td>The solution changes colour</td><td></td></tr> <tr> <td>The metal sinks to the bottom and rises</td><td></td></tr> <tr> <td>The reaction is vigorous</td><td>✓</td></tr> <tr> <td>A silver ball is formed</td><td>✓</td></tr> <tr> <td>A white solid is formed in the water</td><td></td></tr> <tr> <td>The sodium disappears</td><td>✓</td></tr> </tbody> </table>	OBSERVATION	TICK	The metal moves about the surface	✓	The solution changes colour		The metal sinks to the bottom and rises		The reaction is vigorous	✓	A silver ball is formed	✓	A white solid is formed in the water		The sodium disappears	✓	
OBSERVATION	TICK																	
The metal moves about the surface	✓																	
The solution changes colour																		
The metal sinks to the bottom and rises																		
The reaction is vigorous	✓																	
A silver ball is formed	✓																	
A white solid is formed in the water																		
The sodium disappears	✓																	
	Each correct tick gains [1] mark but if more than 4 ticks then each error reduces maximum mark by 1, e.g. 5 ticks – 3 correct and 2 wrong would get [2] marks.	[4]																
(c)	sodium + water → sodium hydroxide + hydrogen [1]	[2]																
(d)	<table border="1"> <thead> <tr> <th>STATEMENT</th><th>TICK</th></tr> </thead> <tbody> <tr> <td>It will react faster than sodium</td><td></td></tr> <tr> <td>Bubbles of gas will be given off</td><td>✓ [1]</td></tr> <tr> <td>It will react more slowly than sodium</td><td>✓ [1]</td></tr> <tr> <td>No bubbles of gas will be given off</td><td></td></tr> </tbody> </table>	STATEMENT	TICK	It will react faster than sodium		Bubbles of gas will be given off	✓ [1]	It will react more slowly than sodium	✓ [1]	No bubbles of gas will be given off		[2] 12						
STATEMENT	TICK																	
It will react faster than sodium																		
Bubbles of gas will be given off	✓ [1]																	
It will react more slowly than sodium	✓ [1]																	
No bubbles of gas will be given off																		

		AVAILABLE MARKS
2	(a) oxygen [1] hydrogen [1] (accept electrons)	[2]
	(b) Iron gates – painting Bicycle chain – oiling Coat hanger – plastic coating Bath tap – chrome plating 4 correct – [3], 2 or 3 correct [2], 1 correct [1]	[3]
	(c) (i) Use tongs to hold magnesium/place magnesium in crucible/on crucible lid/on gauze [1] Heat using a Bunsen burner/Bunsen [1] accept idea of heat using a flame. ( <b>Not just heat</b> )	[2]
	(ii) Any <b>two</b> of: use a fume cupboard/safety screen wear (safety) goggles idea of heating at arm's length use tongs idea of not looking directly at flame wear heat proof gloves not wear gloves any $2 \times [1]$ <b>not general answers</b> such as tie hair back or clear the bench	[2]
	(iii) Any <b>two</b> of: burns with a bright white flame/bright white light/bright light – unless wrongly qualified form a <b>white</b> powder/ash Accept colour as grey-white <b>not</b> grey idea of very vigorous idea of smoke produced unless wrongly qualified ( <b>not</b> gas produced) or other correct any $2 \times [1]$	[2]
	(d) (i) Zinc oxide	[1]
	(ii) solid	[1]
		13
3	(a) Any <b>three</b> of: heat (the reaction flask)/idea of increasing the temperature idea of using zinc powder/smaller pieces of zinc/increasing surface area of zinc ( <b>not just</b> increasing surface area) add a catalyst idea of stirring, shaking or agitating or other correct any $3 \times [1]$	[3]
	(b) (i) accept answers in range $27\text{--}28\text{cm}^3$ But not, e.g. 28 or $28\text{ gas/cm}^3$ correct units needed [1]	[1]
	(ii) $76 \pm 1\text{ s}$ units not needed	[1]
	(iii) Rate slows down/decreases	[1]
	(c) Steeper slope [1] Double volume of gas [1]	[2]
		8

		AVAILABLE MARKS
4 (a) (i)	oxygen	[1]
(ii)	carbon dioxide	[1]
(iii)	carbon monoxide	[1]
(iv)	not enough oxygen	[1]
(v)	toxic/poisonous/silent killer [1] <b>not just ‘kills’</b> no colour/smell/taste <b>or</b> idea of it combining/with haemoglobin/red blood cells [1] <b>or</b> (alternative answer) idea of it combining/binding with haemoglobin/red blood cells [1] idea of this (combining) being in place of oxygen/reducing oxygen/being irreversible [1]	[2]
(b)	Any <b>two</b> of: colourless odourless tasteless denser than air <b>or</b> heavier than air slightly soluble in water or other correct any $2 \times$ [1]	[2]
(c)	carbonic acid or $\text{H}_2\text{CO}_3$	[1]
(d) (i)	calcium carbonate [1]	[1]
(ii)	calcium hydrogen carbonate (is formed) [1] i.e. temporary hardness is caused by calcium hydrogen carbonate explicit that calcium hydrogen carbonate/the <b>product</b> from the reaction is soluble/has dissolved [1] <b>Do not credit</b> idea that “the precipitate”/“calcium carbonate” dissolves, i.e. the second marking point is dependent on recognising that the precipitate has reacted.	[2]
		12

		AVAILABLE MARKS
5 (a) Any two of: solid/powder yellow/pale yellow brittle/hard insoluble in water odourless/slight odour <b>not pungent</b> does not conduct heat/electricity or other correct, e.g. correct melting point 115°C any 2 × [1]	[2]	
(b) (i) blue [1] (ii) pungent [1]		
(c) <b>Indicative points:</b> Effects of acid rain <ul style="list-style-type: none"><li>• corrosion of (limestone) buildings/statues/metal (e.g. bridges/cars) <b>not</b> destroys or dissolves <b>not</b> rocks</li><li>• kills fish/aquatic life (ignore references to animal habitats or animals)</li><li>• idea of defoliation/damages trees <b>or</b> plants <b>or</b> crops/deforestation</li><li>• specific economic reason (1) specific economic reason (2) <b>or</b> idea of causing respiratory problems/asthma – not just health</li></ul> <b>Not</b> any answer relating to increasing global warming  Preventing acid rain <ul style="list-style-type: none"><li>• burn less fossil fuels/use alternative fuel/energy sources/limiting transportation</li><li>• idea of removing sulfur dioxide from industrial/vehicle emissions <b>NB not</b> removing sulfur</li><li>• idea of desulfurization i.e. removing sulfur from fuels</li><li>• idea of government legislation (clean air act)</li></ul>		
<b>Response</b>	<b>Marks</b>	
Candidates must use specialist terms throughout. (6–9 indicative points required). They use good spelling, punctuation and grammar and the form and style are of a high standard.	[5]–[6]	
Candidates use some specialist terms throughout (4–5 indicative points required). They use satisfactory spelling, punctuation and grammar and the form and style are of a satisfactory standard.	[3]–[4]	
Candidates give 1–3 of the indicative points but not necessarily in a logical sequence. They use limited spelling, punctuation and grammar and they have made little use of specialist terms.	[1]–[2]	
Response not worthy of credit. Candidates make no reference to the points above and offer no other suitable response.	[0]	
	[6]	10

		AVAILABLE MARKS
6	(a) Idea of using/shaking soap with water [1] idea that a lather is formed with soft water [1] second mark depends on first	[2]
	(b) Any <b>three</b> of: wastes soap ( <b>not</b> doesn't lather with soap) produces (lime)scale (or fur) in pipes/boilers/kettles (allow blocks <b>hot</b> water pipes but <b>not</b> "blocks pipes") <b>not</b> scale on its own produces scum <b>with soap</b> one clear, explicit economic disadvantage, e.g. the need to buy dishwater salt <b>or</b> need to replace kettles or other correct, e.g. idea of not being good for washing clothes/hair or "stains clothes" any $3 \times [1]$	[3]
	(c) calcium chloride [1] magnesium sulfate [1]	[2] 7
7	(a) (i) 17  (ii) 106  (iii) 58	[1]  [1]  [1]
	(b) The relative formula mass [1] of the substance in grams [1] second mark dependent on first. <b>Do not give credit for</b> the mass (in grams) divided by the relative formula mass or the relative formula mass divided by the mass, i.e. RFM must not be wrongly qualified <b>Alternative answer 1:</b> The mass of a substance which contains the same number of particles as there are in 12g of the carbon–12 (isotope) [2] <b>Alternative answer 2:</b> Idea that a mole contains $6 \times 10^{23}$ particles [2]	[2]
	(c) (i) 38.4 g  (ii) 5	[1]  [1] 7
8	(a) (i) white [1] to blue [1]  (ii) exothermic  (b) released  (c) (i) copper carbonate $\rightarrow$ copper oxide [1] + carbon dioxide [1]  (ii) colour change from green [1] to black [1]	[2]  [1]  [1]  [2]  [2] 8

- 9 (a) A compound/substance made up of carbon and hydrogen atoms **only** (clearly implied) [2]  
 A compound/substance which contains carbon and hydrogen atoms [1] [2]

AVAILABLE MARKS

- (b) clear idea that crude oil is heated (to 400° C) [1]  
 idea that it undergoes a series of evaporation and condensations/vapours condense at different temperatures/idea that fractions condense or are collected at different levels in the column [1]  
 fractions are separated due to differences in boiling point [1] [3]

(c)

Name	Molecular Formula	Structural Formula
Ethane	$C_2H_6$ [1]	<pre>       H   H             H — C — C — H                   H   H     </pre> [1]
Ethene	$C_2H_4$ [1]	<pre>       H           H       \         /         C = C       / \       \       H   H     </pre> [1]

[4]

(d) Landfill

- Advantage: – local treatment of waste so less transport of waste needed  
 – land can be re-landscaped after use/makes use of disused quarries  
 – cheap option (**not** quick)  
 – uses different types of waste – can be used for variety of waste  
 or other correct [1]

- Disadvantage: – wastes land  
 – eyesore  
 – polluting gases released  
 – local streams can be polluted  
 – damages/destroys habitats  
 or other correct [1]

Incineration

- Advantage: – idea of getting rid of waste completely/permanently  
 – idea that waste does not remain for a long time  
 – accept idea of not being an eyesore  
 – heat energy can be harnessed to generate electricity  
 or other correct [1]

- Disadvantage: – ash residue is toxic and specialised landfill needed  
 – expensive  
 – idea that gases produced are toxic or dangerous  
 – idea that greenhouse gases are produced  
 or other correct [1]
