

### Wednesday 15 June 2016 – Afternoon

## GCSE GATEWAY SCIENCE ADDITIONAL SCIENCE B

**B721/01** Additional Science modules B3, C3, P3 (Foundation Tier)

Candidates answer on the Question Paper. A calculator may be used for this paper.

OCR supplied materials:

None

Other materials required:

- Pencil
- Ruler (cm/mm)

**Duration:** 1 hour 15 minutes

Candidate forename				Candidate surname				
Centre number					Candidate nu	umber		

### **INSTRUCTIONS TO CANDIDATES**

- Write your name, centre number and candidate number in the boxes above. Please write clearly and in capital letters.
- Use black ink. HB pencil may be used for graphs and diagrams only.
- Answer all the questions.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Write your answer to each question in the space provided. Additional paper may be used if necessary but you must clearly show your candidate number, centre number and question number(s).
- Do not write in the bar codes.

### **INFORMATION FOR CANDIDATES**

- The quality of written communication is assessed in questions marked with a pencil (🔊).
- A list of equations can be found on page 2.
- The Periodic Table can be found on the back page.
- The number of marks is given in brackets [ ] at the end of each question or part question.
- The total number of marks for this paper is 75.
- This document consists of 28 pages. Any blank pages are indicated.

### **EQUATIONS**

energy = mass  $\times$  specific heat capacity  $\times$  temperature change energy = mass  $\times$  specific latent heat

efficiency = 
$$\frac{\text{useful energy output (x 100\%)}}{\text{total energy input}}$$

wave speed = frequency × wavelength

power = voltage × current

energy supplied = power × time

average speed = 
$$\frac{\text{distance}}{\text{time}}$$

distance = average speed × time

$$s = \frac{(u+v)}{2} \times t$$

$$acceleration = \frac{change \ in \ speed}{time \ taken}$$

force = mass × acceleration

weight = mass × gravitational field strength

work done = force  $\times$  distance

$$power = \frac{work done}{time}$$

 $power = force \times speed$ 

$$KE = \frac{1}{2}mv^2$$

momentum = mass × velocity

$$force = \frac{change \ in \ momentum}{time}$$

GPE = mgh

$$mgh = \frac{1}{2}mv^2$$

$$resistance = \frac{voltage}{current}$$

### 3 BLANK PAGE

# Question 1 begins on page 4 PLEASE DO NOT WRITE ON THIS PAGE

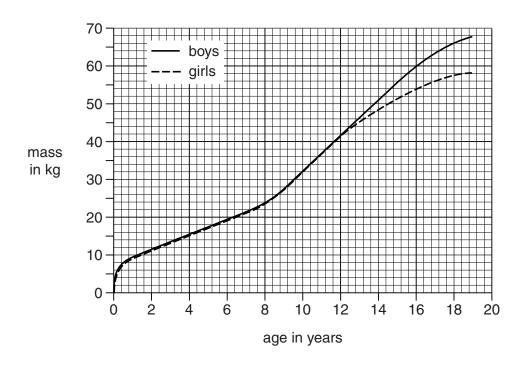

### Answer all the questions.

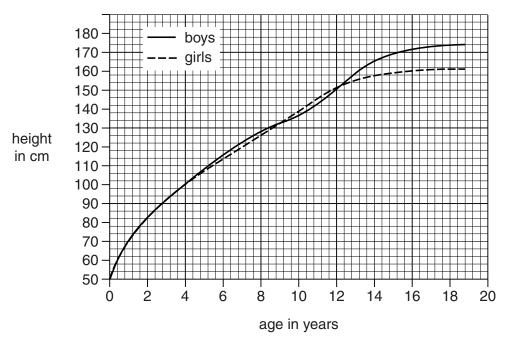

### **SECTION A – Module B3**

1 This question is about growth in boys and girls.

Look at the graphs below.

They show how mass and height change as boys and girls grow.

(a)	Write down the age when the mass of boys becomes greater than the mass of girls.  [1]
(b)	
	[2]
(c)	Cell division occurs throughout growth.
	During which age range is cell division fastest?
	Look at the list.
	age range in years
	0 to 2
	4 to 6
	6 to 8
	12 to 14 16 to 18
	10 to 10
	Choose your answer from the list.
	[1]
	[Total: 4]

2 Mike competes in the triathlon.

This event involves swimming, cycling and running.

(a) Mike wants to make sure that his training will help him to improve.

Mike needs to keep within his target heart rate zone when training.

Look at the table below.

It shows predicted maximum heart rates and target heart rate zones.

Predicted maximum heart rate in beats per minute	Target heart rate zone in beats per minute
200	120 – 170
195	117 – 166
190	114 – 162
185	111 – 157
180	108 – 153

Table 2

To find his target heart rate zone, Mike must calculate his predicted maximum heart rate.

### predicted maximum heart rate = 220 - age

Mike is 30 years old.

(i)	What is Mike's target heart rate zone?
	Use the predicted maximum heart rate formula and Table 2 above to help you to answer

.....[2]

(ii) Mike measures his heart rate during each stage of his training.Look at the table of his results.

	Heart rate in beats per minute
Swimming	110
Cycling	162
Running	160

	Mike will gain the most benefit from his training if his heart rate stays within the target heart rate zone.
	What changes should Mike make to his training to get the most benefit?
	F41
	[1]
(iii)	Part of Mike's training is to measure his recovery time after exercise.
	How could Mike measure his recovery time?
	[2]
Whe	en Mike takes part in a triathlon the amount of aerobic respiration increases.
Ехр	lain why.
	[2]

[Total: 7]

(b)

### 3 (a) Look at the pictures below.

The grey wolf is a wild animal.

All dog breeds like the pug are thought to have been bred originally from the grey wolf.

Some pug dogs have difficulty breathing.

(i) Describe how humans could have bred a dog like the pug from the grey wolf.Suggest why some pugs may have breathing problems.

The quality of written communication will be assessed in your answer to this question.
 [6]

							[Total: 9]
	u.		aipioid	ioi tiiiood	gamoto	2,9010	[1]
	ac	crosome	diploid	fertilised	gamete	zygote	
	(ii)	Put a ring arou	and the word that	describes dog skil	n cells.		[1]
	(i)	How many chror	mosomes are in	a dog sperm cell?			[4]
(b)	Dog	skin cells have 7	78 chromosomes	S.			
		Mutations are ch	nanges to				[1]
		Complete the se	entence.				
	(ii)	The different cha	aracteristics of d	ogs may be caused	d by <b>mutations</b> in	cells.	

Question 4 begins on page 10

### 4 (a) This question is about enzymes.

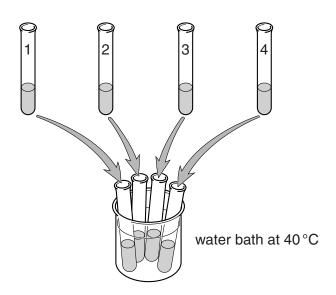

Pepsin is an enzyme that breaks down protein.

Egg-white is a protein that makes water cloudy.

Look at the table below.

It shows an investigation into the effect of adding the enzyme pepsin to egg-white.

Tube 1	Tube 2	Tube 3	Tube 4
5 cm <sup>3</sup> egg-white	5 cm <sup>3</sup> egg-white	5 cm <sup>3</sup> egg-white	5 cm <sup>3</sup> egg-white
3 drops distilled water	3 drops hydrochloric acid	3 drops hydrochloric acid	3 drops hydrochloric acid
1 cm <sup>3</sup> pepsin	1 cm <sup>3</sup> distilled water	1 cm <sup>3</sup> pepsin	1 cm <sup>3</sup> of boiled pepsin

The tubes were put in a water bath at 40  $^{\circ}\text{C}$  for 5 minutes.

Look at the results below.

		Observations of tube contents	
Tube	Contents	At start	At end
1	egg-white, water and pepsin	cloudy	almost clear
2	egg-white, hydrochloric acid and water	cloudy	cloudy
3	egg-white, hydrochloric acid and pepsin	cloudy	clear
4	egg-white, hydrochloric acid and boiled pepsin	cloudy	cloudy

	(1)	to work.
		[2]
	(ii)	How does the 'lock and key' mechanism explain why pepsin will <b>only</b> break down protein and <b>not</b> other food groups like starch?
		You may draw a diagram to help your answer.
		[2]
(b)	Wh	y were all the tubes kept at 40 °C?
		[1]
		 [Total: 5]
		[ Total: 0]

### **SECTION B – Module C3**

- 5 Pete and Helen investigate the reaction between marble chips (calcium carbonate) and nitric acid. Calcium nitrate, carbon dioxide and water are made.
  - (a) Write the word equation for this reaction.

.....[1]

(b) Pete and Helen measure the mass of carbon dioxide made every 30 seconds during the reaction.

They do the experiment again.

They use the same amount of acid and marble chips.

This time they use warm nitric acid instead of cold nitric acid.

Look at the graph below. It shows their results.

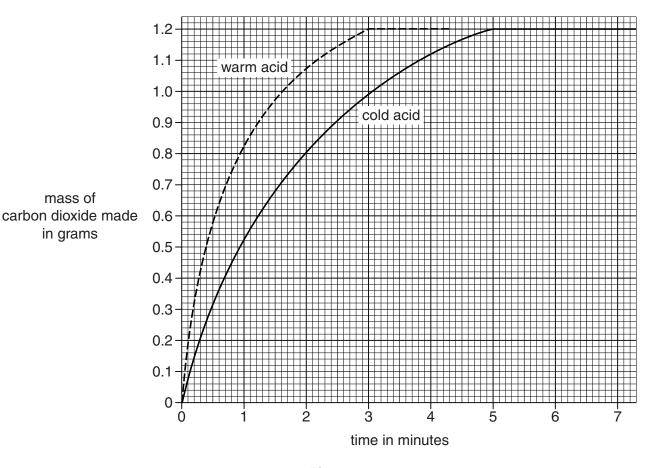

Fig. 5

mass of

in grams

Look at the graph in Fig. 5 for the **cold** acid.

	(i)	What mass of carbon dioxide is made after 1 minute?	
		answerg	[1]
	(ii)	When is the reaction fastest?	
		Tick (✓) the correct box.	
		between 0 and 1 minute	
		between 1 and 2 minutes	
		between 2 and 3 minutes	
		between 3 and 4 minutes	[1]
	(iii)	Pete thinks that the graph for the <b>cold</b> acid shows that the mass of gas made earninute is the same.	ach
		Is Pete right? Explain your answer.	
			[1]
(c)	The	e reaction with warm acid stops after 3 minutes.	
	Exp	plain why the reaction stops.	
			[1]
(d)	The	e reaction with <b>cold</b> nitric acid is slower than the reaction with warm nitric acid.	
	Exp	plain, in terms of the reacting particle model, why the reaction is <b>slower</b> with cold acid.	
			[2]

(e)	Reactions are faster at higher temperatures.
	Write down <b>two</b> other ways of making reactions faster.
	[2]
	[Total: 9]

6 Soldiers use 'flameless heaters' to heat their meals.

The 'flameless heater' heats the food safely and quickly without using a flame.

The heater uses a chemical reaction between magnesium metal and water.

$$Mg + 2H_2O \rightarrow Mg(OH)_2 + H_2$$

(a)	Look at the equation.
	Write down the formula for one <b>reactant</b> in this reaction.
	[1]
(b)	The reaction is <b>exothermic</b> .
	What is meant by an exothermic reaction?
	[1]
(c)	A scientist is trying to improve the 'flameless heaters' so that they heat the food more quickly.

Heater	Temperature rise in the heater in °C	Time taken in minutes
Α	40	8
В	42	7
С	24	6
D	50	10

			<u> </u>	
Which heater he	eats up quic	kest?		
Explain your an	swer using t	he temperature ris	e and time taken.	
				ro.

[Total: 4]

**Turn over** 

Look at her results.

7 Pensby pharmaceuticals are making a new painkiller.

They make the drug using a  ${\bf batch}$  process rather than a continuous process.

(a)	Write about <b>two</b> differences between a batch process and a continuous process.
/ <b>L</b> \	Lt is after symposius to make and develop new dware
(D)	It is often expensive to make and develop new drugs.  Explain <b>two</b> reasons why.
	Explain two reasons why.
	[2]

(c) Pensby pharmaceuticals investigate four different methods of making the new painkiller.

Look at the table below.

It gives information about the four methods they use.

Method	Method Predicted mass in g		Percentage yield	Atom economy
Α	6.7	4.0	60%	50%
В	14.2	7.1	50%	85%
С	11.5	6.9		40%
D	13.3	12.0	90%	80%

Use the information to calculate the percentage yield for method **C**.

Decide which method they should use to make the p	painkiller and explain your choice.
---	-------------------------------------

ne quality of written communication will be assessed in your answer to this question.
 [6]

[Total: 10]

### 8 Diamonds are used in jewellery.

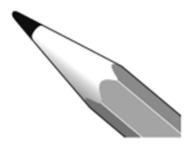

One physical property of diamond is that it is colourless.

Graphite is used in pencil leads.

One physical property of graphite is that it is slippery.

Diamond and graphite have some physical properties in common.

	Write down <b>two</b> of these properties.
[2]	

### 19 BLANK PAGE

Question 9 begins on page 20
PLEASE DO NOT WRITE ON THIS PAGE

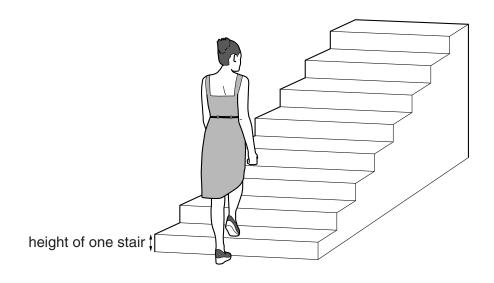

### **SECTION C - Module P3**

- **9** This question is about work, energy and power.
  - (a) What is the unit for energy?

Choose from

hertz	joule	newton	watt	
 				. [1]

(b) Janna walks up stairs.

(i) The height of one stair is 0.15 m.

Janna	walks	up	f <b>our</b> s	tairs.	She	weighs 50	)0 N.
-------	-------	----	----------------	--------	-----	-----------	-------

Calculate the work done by Janna using this data.

answer J	[2

(ii) Janna walks up another four stairs.

She has now walked up eight stairs.

Compare the amount of work done walking up eight stairs with the work done walking up four stairs.

(c) Janna walks up the stairs every day.

She walks at different speeds each day.

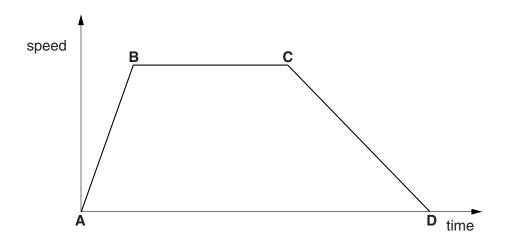

Look at the information below.

Day	Number of stairs	Time in seconds		
Monday	8	4.2		
Tuesday	8	4.4		
Wednesday	8	4.1		
Thursday	8	3.9		
Friday	8	5.4		

On which day did she develop the <b>most</b> power walking up the stairs?	
	[1]
	[Total: 5]

Question 10 begins on page 22

10 Look at the speed-time graph below for a journey.

Describe the changes in speed **and** acceleration that take place during the whole journey.

Use letters **A**, **B**, **C** and **D** in your answer.

The quality of written communication will be assessed in your answer to this question.							
 [6]							

### 23 BLANK PAGE

Question 11 begins on page 24

PLEASE DO NOT WRITE ON THIS PAGE

11 Seat belts are a safety feature in cars.

The design of seat belts has changed since they were first fitted in cars.

(a) Scientists collect test data to help them design new seat belts.

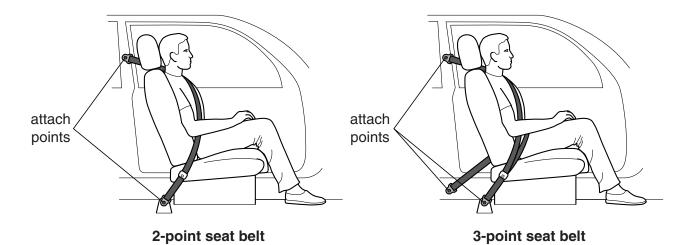

(i)	Suggest methods the scientists use to collect valid test data for seat belts.

.....[2]

- (ii) Why is it important for scientists to publish the test data they collect?
- .....
- **(b)** Some seat belts are attached to the car in two places.

Others are attached in three places.

Look at the diagram below.

Suggest why 3-point seat belts are better at reducing injuries.

(c)	Test data produced by scientists show that the material which seat belts are made from is important.
	Write down one property which seat belt material must have and explain why seat belts are replaced after a crash.
	[2]
(d)	Cars have many different safety features.
	Seat belts protect the driver in the car <b>during</b> an accident.
	Write down the name of a car safety feature that is designed to <b>prevent</b> accidents.
	[1]
	[Total: 8]

Question 12 begins on page 26

**12** Taran wants to buy a new car.

He uses the internet to find data about fuel consumption and emissions.

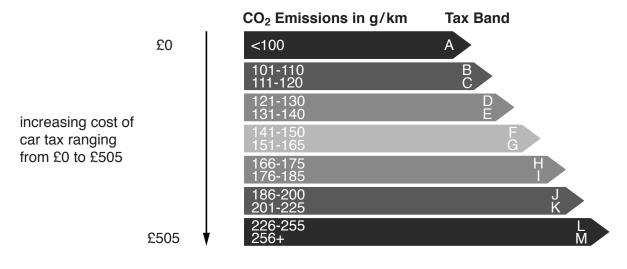

Look at the table below with the information he finds about two different car models.

Model R	Model S			
Fuel consumption in litres per 100 km:	Fuel consumption in litres per 100 km:			
• In town 5.7	• In town 8.2			
On motorways 4.1	On motorways 5.2			
Combined 4.6	Combined 6.3			
Carbon dioxide emission 124.0 g/km	Carbon dioxide emission 149.0 g/km			
This vehicle is in the UK tax band D and this costs £110.00 a year.				

(a)	Taran looks at the data about <b>fuel consumption</b> .				
	(i)	The fuel consumption for both models is measured in the same units.			
		Why is this important?			
		[1]			
	(ii)	Write down <b>two</b> conclusions from the table about fuel consumption.			
		[2]			

(b) Taran looks at the carbon dioxide emissions of the two cars, Model R and Model S.

He also uses the chart below to help him find the tax band for model S.

Use the information in the table and the chart to find the tax band for model <b>S</b> and use this to estimate the cost to buy tax for model <b>S</b> .
The tax band for model ${\bf S}$ is and the estimated cost is ${\bf \mathfrak L}$ [2]
The kinetic energy (KE) of a car changes during its journey.
Suggest why the average kinetic energy of a car is less when travelling in a town compared to when travelling on a motorway.
[1]

[Total: 6]
